**Note:** The screwing-in torque of 5 to 10Ncm should not be exceeded. Please screw in all ICX cover screws and healing caps only by hand. If you screw them in with 20 or more Ncm, there is a risk that conical forces will be created, which will make it almost impossible to loosen them later.

**Note:** H = Length from implant top edge - GH = Gingival height

Dear customers,

**Please note the two different platforms of the BL and TL implants. Select the BL and TL laboratory analogs accordingly.** This is important if the prosthetics later have to touch the different platforms of the implants due to the low emergence profile. different platforms of the implants (GH 0mm).

## Field of application and indication

The ICX-MULTI® concept is a prosthetic concept for immediate restoration of edentulous patients. For better support of the provisional restoration, it is possible for the posterior implants to be placed at a 17° or 35° angle distally. This angulation is compensated by the special abutments.

**Note:** The tightening torque of 5 to 10Ncm should not be exceeded. Please screw in all ICX cover and healing caps by hand only. If you screw them in with 20 or more Ncm, there is a risk that conical forces will be created, which will make it almost impossible to loosen them later.

### Field of application and indication

The ICX-MULTI® concept is a prosthetic concept for immediate restoration of edentulous patients. For better support of the subsequent restoration, it is possible for the posterior implants to be placed at a 17° or 35° angle distally. This angulation is compensated by the special abutments.

Dear customers,

Please note the two different platforms of the BL and TL implants during transfer.

Select the BL and TL laboratory analogs accordingly.

This is important if the prosthetics must later touch the different platforms of the implants due to the low emergence profile (GH 0mm).
