ICX-PREFORMS AND ICX-PREFORM HOLDER

ICX
THE 5-AXIS

THE ADVANTAGES OF THE ICX-PREFORM ABUTMENT HOLDERS AT A GLANCE:

- much more precise manufacturing than with conventional holders - due to the innovative, one-piece design
- short production times - due to simultaneous machining of six blanks in one operation
- maximum protection for the precisely designed implant interface - by clamping the abutment only on the front side
- very precise and not error-prone in production
- extremely reasonable investment-through the simple construction of the preform abutment holder and the avoidance of expensive replacement parts

ICX-PREFORMS FOR VARIOUS HOLDER SYSTEMS

MED-Connection (ICX-System/medentis®)

MDK-Connection (Medentika®)
